

Vanshika Juneja

UI/UX Designer

junejavanshika05@gmail.com · +91 74280 76156 · Delhi, India / Cork, Ireland

PROFILE

UI/UX designer from Delhi, currently completing a Master's at University College Cork in Ireland. Design for me starts long before opening Figma. It begins with understanding who the person is and where the current experience is letting them down. I spend most of my time in the research and ideation phase, which is also where I enjoy myself most. Looking for a full-time role or freelance work where thoughtful design is genuinely valued.

EDUCATION

MSc Design and Development in Digital Business	2025 – 2026
University College Cork, Ireland	
BA (Hons) Journalism and Mass Communication	2022 – 2025
Trinity Institute of Professional Studies, IPU, New Delhi	
Senior Secondary Education	Completed 2022
Manav Sthali School, New Delhi	

SKILLS

Design

Figma, Wireframing, Prototyping, Service Design, UX Research, Ideation, User Personas, Journey Mapping

Development

HTML, CSS, Vibe Coding, Canva

Tools

Jira, Digital Marketing

DESIGN PROJECTS

EduPath

An AI-powered EdTech platform rethinking how students are onboarded into a learning product. Led the full design process from problem research through to a complete Figma prototype.

Markd

A two-sided feedback marketplace connecting students with professional recruiters so the feedback they receive actually carries weight. Includes a complete design system and a seven-screen prototype.

DRIP Circle

Service design project for a fictional eco-conscious fashion brand. Played a lead role in ideation and design, covering research, personas, wireflows, and a live prototype. Group project at UCC.

Zomato UX Teardown

A comparative UX critique examining why Zomato loses orders on perception rather than price, with a redesigned restaurant page and fully justified design decisions.

Apple Music Redesign

A focused home screen redesign addressing a hierarchy problem where the app consistently surfaced albums over songs despite most users wanting the opposite.

ACHIEVEMENT

AI Entrepreneurship Workshop — University College Cork, 2025

Participated in a structured workshop at UCC focused on building a business concept using AI tools. Led the ideation for the team and proposed the concept that the mentors selected as the winner across all competing teams. The concept was a fictional e-commerce platform designed for people who struggle with impulse buying online. It replicated the complete shopping experience — browsing, adding to cart, entering payment details, and placing an order — with the key distinction that no real transaction ever occurs, giving users a satisfying but consequence-free outlet for the urge to purchase.
