

EDUCATION

MSc Design & Development in Digital Business

University College Cork, Ireland
2025 – 2026

BA Journalism & Mass Communication

Trinity Institute of Professional Studies, IPU, Delhi
2022 – 2025

Secondary Education

Manav Sthali School, Delhi
Completed 2022

SKILLS

Design

Figma · Wireframing · Prototyping · User Research
Canva

Development

HTML · CSS · Vibe Coding · AI-assisted build

Tools & Methods

Jira · Digital Marketing · UX Writing
Persona Development

WHAT I BRING

- Research-first thinking before touching any design tool
- Cross-disciplinary background across journalism, communication and design
- Comfortable leading both design and business strategy in team settings
- Ability to design and build — from Figma to functional website

PROFILE

UI/UX designer with a background in journalism and a Masters from UCC, Cork. I start every project by understanding the person using it — research comes before Figma. I also build what I design, which means I think in products not just screens. Currently leading the design and business strategy on a real-world public safety project with HSE Ireland as part of my Masters programme.

EXPERIENCE

UI/UX Designer & Business Strategist — Group Project

HSE South Ireland (Health Service Executive) | May 2026 – Present

- Handling both the design and business sides of the project within a multidisciplinary UCC student team, working on a real client brief set by an Emergency Management Officer at HSE South.
- The project tackles a public safety problem: during severe weather events in Ireland, road condition information is fragmented, contradictory and unverifiable — creating real risk for healthcare workers, patients and the public.
- Leading UX research to map how different user groups — ambulance crews, dialysis patients, public health nurses and community members — make travel decisions under dangerous conditions.
- Driving the design of a trusted information standard that defines how road disruptions should be described, verified, communicated and recorded so every weather event is handled better than the last.
- Working on the business model and adoption strategy, identifying key stakeholders across the 32 local authorities in Ireland and exploring how the standard could be implemented nationally.
- Investigating the language problem at the heart of the issue — terms like "closed" and "impassable" have no agreed definition across agencies, making information unreliable at the moment it matters most.

SELECTED PROJECTS

EduPath — Personalised Learning Platform

UCC Masters Project

- Designed an adaptive learning platform for students with diverse needs. Led the full UX process from research and personas through to high-fidelity prototypes in Figma.

Markd — Freelance Reputation Tool

UCC Masters Project

- End-to-end design of a platform helping freelancers build verifiable professional reputations. Focused on trust-building flows and clear information hierarchy.

DRIP Circle — Sustainable Fashion App

Personal Project

- Concept and UX design for a community-driven sustainable fashion platform. Developed user journeys, onboarding flows and a complete visual system.

Zomato UX Teardown & Apple Music Redesign

Case Studies

- In-depth UX audits of both products. Identified usability failures through heuristic evaluation and proposed redesigns backed by user research and App Store review analysis.

ACHIEVEMENT

Claude AI Workshop — UCC Cork | Winning Team · 2025

Proposed the concept selected by mentors out of all competing teams — a fictional shopping platform letting impulse buyers complete the full cart-to-checkout experience safely, without real transactions. Led concept development while teammates handled the technical build.
